<b>Target version:</b>	1.0		
<b>Description</b> Create API for the dashboard entries.  Widgets:  Today's Status Agents & Leads Status Agents & Phones			

### History

#### #1 - 07/28/2014 10:15 AM - Jerico James Milo

- % Done changed from 0 to 80

Demian,

Below are the API's done and for testing from the dashboard, the only remaining widget is the Agents/Phones most likely 2 functions. From the naming convention itself, you can determine its function. For example: getAgentsOnline.php(this will get the total agents online) just remove the word get to determine its function.

Server: web01

Location of the API: /var/www/jameshv/goAPI/

getAgentsOnline.php  
getLeadsinHopper.php  
getTotalAgentsWaitCalls.php  
getTotalInboundSales.php  
getliveinbound.php  
getDroppedPercentage.php  
getOutSalesPerHour.php  
getTotalAnsweredCalls.php  
getTotalOutboundSales.php  
getliveoutbound.php  
getINSalesHour.php  
getTotalActiveLeads.php  
getTotalCalls.php  
getTotalSales.php  
getringingcall.php  
getInSalesPerHour.php  
getTotalAgentsCall.php  
getTotalDialableLeads.php  
getTotalcalls.php  
getIncomingQueue.php  
getTotalAgentsPaused.php  
getTotalDroppedCalls.php

Other API's involve:

goDBconnectA.php (connection to asterisk database)  
goDBconnectB.php (connection to goautodial database)  
goSample.php (this is how you will code[php] to get the requested values)  
goAPI.php (call the API above)  
goFunctions.php (centralize functions used by the API's above)
